

Burning Planet

THE LINK BETWEEN CLIMATE CHANGE AND WILDFIRES

Climate change is accelerating, leading to increased forest fires worldwide

The urgent need for effective solutions

2.2 °F UP AND KEEP RISING

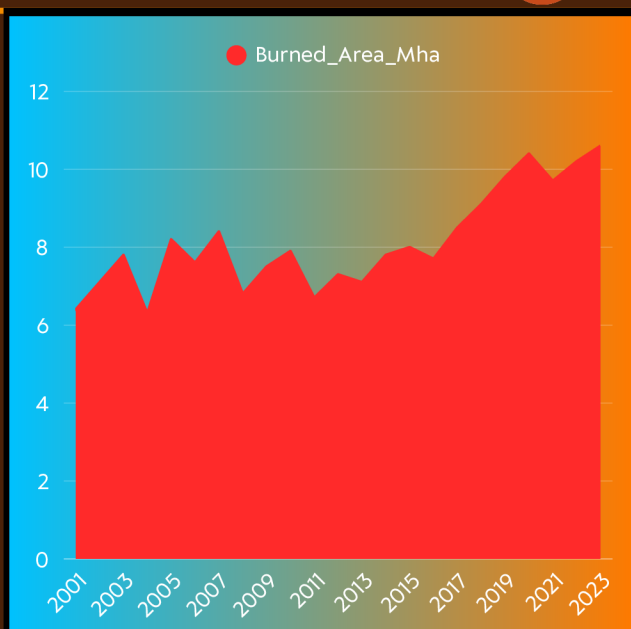

Rising temperature is creating easier ignition conditions for fires

LARGER BURN AREA

Forests are drying out and burning more often, turning climate heat into wildfire fuel

RISING TEMPERATURES

DRIER FORESTS

MORE CO₂ RELEASED

LARGER WILDFIRES

BAD CYCLE

Wildfires release massive amounts of CO₂, feeding a vicious cycle that accelerates global warming

Act Now: Protect Our Forest and Planet!
